

MOOSE Project Part 2

- Fuel pin dimensions listed – 2D RZ
- Assume reasonable values for thermal conductivities, T dependent
- Utilize axial T_{cool} , with $T_{\text{cool}}^{\text{in}} = 500 \text{ K}$, reasonable flow rate, heat capacity, etc.
- Utilize axial LHR, with $\text{LHR}^0 = 350 \text{ W/cm}$
- Solve temperature profile for cladding surface, fuel surface, fuel centerline
- Find axial location of peak centerline temperature
- Make sure you are instituting an appropriate mesh!

MOOSE Part 2 Writeup

- Will upload input and output files to Moodle
- Write up with deliverables from Part 1 & 2, choice of materials, mesh, details therein, etc.
- Expected to have fixed any issues with Part 1
- If any major changes to Part 1 files, include them in submission
- Part 2 writeup max of 10 pages
- Due April 7
